

FREEDOM RYDER

1-800-800-5828 PATENTED MADE IN USA @ BRIKE INT. LTD.

FREEDOM RYDER

The original Freedom Ryder model is a tested and proven handcycle design that first achieved acclaim in the early years of handcycling when Dave Cornelsen rode from the West Coast to the East Coast in an unbelievable and still unbeaten eighteen days. No handcycle can claim more historical firsts. It is now referred to among enthusiasts as a Freedom Ryder "Classic".

This model has been continually updated throughout the years to improve its performance and is great for the beginning handcyclist, the economy minded enthusiast or the fitness seeking cyclist exploring handcycling as a means of upper-body conditioning. These bikes feature the same body-lean steering as our world-class race bikes

in a more upright seating position. Positive index shifting and an ergonomically located brake lever make this handcycle a great performer for everyone from the novice to the seasoned rider.

These handcycles are known for their durability, front wheel traction and maneuverability. One unique feature that is not offered by any other handcycle is their two piece quick release frame. By pulling one pin the frame is easily separated into two easily handled pieces for convenient transport by car or plane. Also, the quick release rear wheels and an easily removable axle make transport a snap. The Freedom Ryder features Shimano components and rolls on 26" X 559 wheels. Unlike many other handcycles, the two piece padded seat, quick release frame, anodizing throughout and orange visibility flag are all standard features on these classic Freedom Ryders.

Quick release rear wheel and rear axle assembly

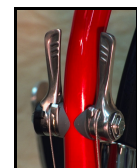

Removable rear axle assembly

Independently adjustable footrests

Quick frame separation

Indexing shift-levers

FREEDOM RYDER IS THE MOST TRUSTED NAME IN HANDCYCLING!

We have always felt a handcycle should be more than a head-set steered tricycle converted to hand power. Tricycles like this are missing one very important dimension: the ability of the rider to pitch his body into a turn like a bicycle to counteract centrifugal force. Bicycles, motorcycles, boats and airplanes all rotate about their "Roll Axis" as they bank into turns; we believe a handcycle should too. Freedom Ryder, lean steering, and some very gifted athletes created the sport of handcycling as we know it today! No other handcycle has the grace, beauty and style of a Freedom Ryder.
